Campmaster

Lightweight Caravan

The Campmaster Lightweight Caravan is built with the future in mind. It can be towed by the smallest of current vehicles. With vehicles getting smaller as well as Hybrid and electric cars having limited towing capacity, the CM LC3 has been built with the future at the forefront of its unique design.

With an unladen weight of only 424KGs the CM LC3 is easy to tow and easy to handle when not attached to the car.

The caravan is only 1608mm wide (Including wheel arch) meaning it is approximately 30cm narrower than the average family car. At only 1803mm high and streamlined drag is minimal. The CM LC3 will fit in any car garage with room to spare.

Many car parks have height restrictions set at 1.9 meters so there is no need to worry with the CM LC3 when you're on tour. Narrow country lanes, remote campsites and beauty spots are well within reach.

Lightweight, stylish, easy to tow, the CM LC3 will provide you with comfortable holidays and memories for years to come.
