# hot news

and extreme value for 2010

Dear Outdoor-Enthusiast,

As you look through the latest product offers from **Robens**, we hope you that will be surprised and intrigued by the new additions to the range aimed at meeting your outdoor adventure needs. We wish to make the very best products available to our customers at all times and are continuously striving to optimise our ranges and expand them with innovative solutions. For example new additions with interesting architecture and details can be found in our **Adventure** and **Outback** tent ranges. One thing is still the same – excellent price-performance ratio. With our company philosophy of 'EXTREME VALUE' it is our declared aim to offer our customers outstanding quality at reasonable prices – and this applies to all products in the **Robens** range.

In tents, our **Adventure** series has a number of new additions that stand out to be noticed. The very light weight Trailstar tents offer a backpacking solution where weight and pack size are key elements. For a little more room and comfort new model, Cosy Dreamer, has been added to the highly successful Dreamer range. Perhaps the most exciting development is the Cabin tents with a unique pole construction that enable the tent to be both free-standing and flysheet first pitching. We were so impressed with the new Cabin tents that we have used the concept within the much desired **Outback** series in the guise of a model called Vista. The latest **Lite** series appears in traditional dark green with a bright yellow inner tent. The newly introduced double silicon fabric introduced for 2009, has now established itself and will continue on all models. All the **Trekking** favorite models continue in this series for 2010.

**Robens** rucsacs have undergone a number of changes for 2010. New to the range is a modern alpine style rucsac called

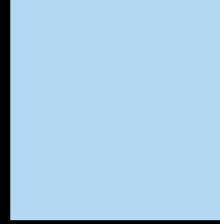

Impact which has been designed with a number of sewn-in features such as additional storage, easy access and comfortable, well ventilated load carrying harness. Further to this we have developed a technical daysac, Kaos, using many of the key features of the Impact but merging it into a pack that can be used in a variety of situations from city touring to mountain biking on your favourite single track. Havoc was designed with simplicity in mind. A well constructed ventilated harness and features make it one of the most versatile packs in the range. Tempting all those lightweight enthusiasts we have been able to introduce a pack that is both very lightweight and comfortable. Called Reap it has inbuilt compatibility for use with a hydration system. Sleeping bags have always been a strong area for **Robens** and this is further enhanced by re-designing the Atlantic range with new colours and specifications, and introducing a lightweight down range called Down Lite. Predominantly 2-3 season bags, the very small pack size and lightweight make it a must have when space is limited.

It does not matter how or where you are looking for adventure or relaxation surrounded by nature, whether on challenging, long hikes in Scandinavia or travelling with your family to a sunny camp site on the Adriatic, far away from the hustle and bustle of our everyday life – with **Robens** you will find the right features for your particular requirements and the best value for your money. Make your own comparisons!

## The 4 Robens Tent Ranges

**Robens Lite** – an ultra light range of tents that will allow you freedom to travel without the bulk and weight of many other styles. Keeping weight and cost to a minimum is our philosophy and the design and materials are used to ensure that there is no loss of performance under extreme use.

**Robens Trekking** – a great line in quality tents that are designed for the outdoors as functional, innovative and providing value and function. Made to exacting standards these tents offer the consumer stability, space and portability into the wild environments that exist throughout Europe and the World.

**Robens Adventure** – a highly competitive line that matches renowned styles with quality fabrics and components at realistic prices. Whether you want a small trekking style tent or a large fullscale camping tent for groups or families your answer is here.

**Robens Outback** – This line of tents are produced in breathable HydroTex Polycotton. Compared with polyester outer tents, this novel fabric keeps interiors noticeably cooler and more refreshing in direct sunshine. All models feature a zip-out groundsheet.

## Materials and Construction

Every Robens tent is made from high quality materials and manufactured with great care. All tents are designed and then tested thoroughly before being allowed to reach the market. Featuring fabrics such as HydroTex Ultralite, HydroTex HD, HydroTex 5000 and HydroTex Polycotton throughout the range as well as details like alloy poles, gear lofts, clip-on pole system and a carrier bag with compression straps these tents are made to exacting standards for all users. Each fabric has built in UV resistance for a longer life and with quality fittings these tents are designed to withstand the rigours of outdoor life.

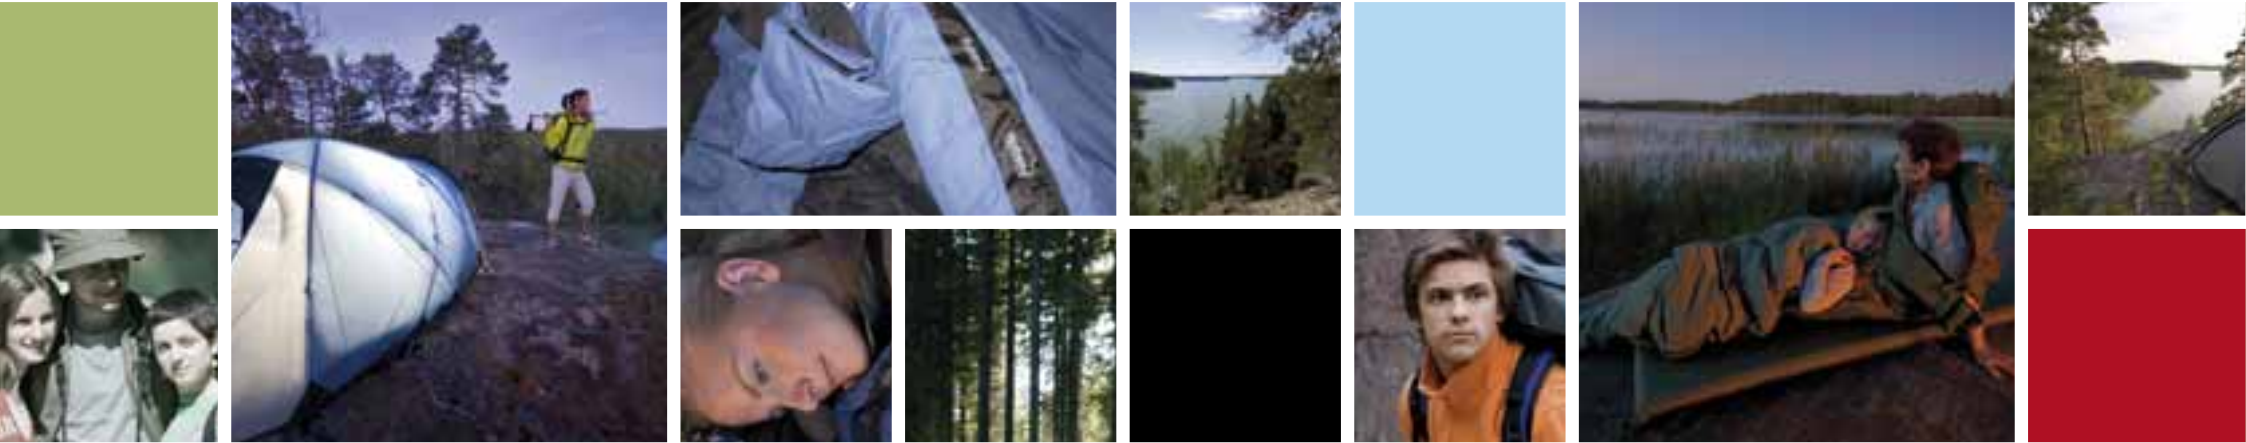

\*In the documentation for Robens tents we always list two different weights: **The maximum (max.)** weight is the weight of the complete tent as we supply it - including the carrier bag, pre-attached guylines, pegs, repair patches, and a spare ferrule for pole repair; with the large Adventure models this also includes the groundsheets for the front living area and the poles and guylines for erecting the entrances. **The minimum (min.)** weight is the weight of the tent without guylines or any other accessories and with only the basic minimum number of pegs needed to erect the tent.

# the lite tents

With the new HydroTex Ultralite, which is exclusively manufactured for us, we have succeeded in further reducing the weight of our Lite tents. The material is a 30 denier ripstop polyester fabric, which has a silicone coating on both sides and a 3000 mm waterproof rating. HydroTex Ultralite also has amazing strength, better UV-resistance than comparable nylon fabrics and requires less retensioning after getting wet. Reinforced loading points and the strong floor with a waterproof rating of 10,000 mm ensures that the tent has a long service life.

- Pegs made of strong alloy
- Long adjustable guy lines are connected to a pair of slot webbings
- Sturdy webbings with woven loops make extra strong storm guying points and spread the pressure
- Internal Pole Sleeve System, for quick and easy erection and dismantling, the inner tent staying dry in rainy weather.
- Fly sheet made of HydroTex Ultralite with a hydrostatic head of more than 3000 mm
- Internal Pole Sleeve System for better wind stability
- Main pegging points have loops which also can be fastened by stones, logs or skies

Robens Lite - an ultra light range of tents that will allow you freedom to travel without the bulk and weight of many other styles. Keeping weight and cost to a minimum is our philosophy and the design and materials are used to ensure that there is no loss of performance under extreme use.

Item 300505

# Osprey 2

Flysheet:	HydroTex Ultralite, Silicon coated on both sides
Hydrostatic Head:	3000 mm
Inner tent:	Ripstop polyester, breathable
Groundsheet:	Polyester 210T PU coated, 10.000 mm, sealed seams
Poles:	Alloy #7001 T6, 9.1 mm anodised
Max/Min. load	app. 2.6 / 2.5 kg
Sleeps:	2 persons
Characteristics:	Ultralight trekking tent for 2 persons

Osprey 2 is a lightweight two-person tent, well equipped to meet the highest demands: The internal pole sleeves increase wind stability and give snow no opportunity to build up. The generously sized vents, which can be operated from inside the inner tent, ensure good through ventilation and the two side entrances to the roomy apse can provide more than one way in. This tent will also fully satisfy your most demanding touring needs.

# Osprey 3 EX

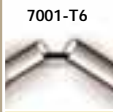

Flysheet:	HydroTex Ultralite, Silicon coated on both sides
Hydrostatic Head:	3000 mm
Inner tent:	Ripstop polyester, breathable
Groundsheet:	Polyester 210T PU coated, 10.000 mm, sealed seams
Poles:	Alloy #7001 T6, 9.1 mm anodised
Max/Min. load	app. 3.8 / 3.7 kg
Sleeps:	3 persons
Characteristics:	Ultralight trekking tent for 3 persons

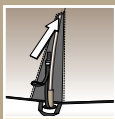

The Osprey 3 EX boasts the same characteristics as the smaller model, but, as well as the large inner tent, it has a comfortable living area which provides valuable service, for example as a kitchen, particularly in bad weather. The entrance can be closed with a net door for better ventilation. The tent is dimensioned to accommodate three persons when the emphasis is on travelling light – or two persons in more comfort.

Item 300508

# Kestrel 2

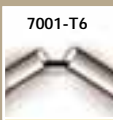

Flysheet:	HydroTex Ultralite, Silicon coated on both sides
Hydrostatic Head:	3000 mm
Inner tent:	Ripstop polyester, breathable
Groundsheet:	Polyester 210T PU coated, 10.000 mm, sealed seams
Poles:	Alloy #7001 T6, 9.1 mm anodised
Max/Min. load	app. 2.9 / 2.8 kg
Sleeps:	2 persons
Characteristics:	Ultralight trekking tent for 2 persons

The Kestrel 2 is the further development of our successful Lemon Light 2, which has received top marks in numerous tests. The pole ends have a new fastening system and using our lightweight, robust synthetic outer sheet, the flysheet can be better sealed at ground level and retensioned.

# Kestrel 3

Flysheet:	HydroTex Ultralite, Silicon coated on both sides
Hydrostatic Head:	3000 mm
Inner tent:	Ripstop polyester, breathable
Groundsheet:	Polyester 210T PU coated, 10.000 mm, sealed seams
Poles:	Alloy #7001 T6, 9.1 mm anodised
Max/Min. load	app. 3.2 / 3.1 kg
Sleeps:	3 persons
Characteristics:	Ultralight trekking tent for 3 persons

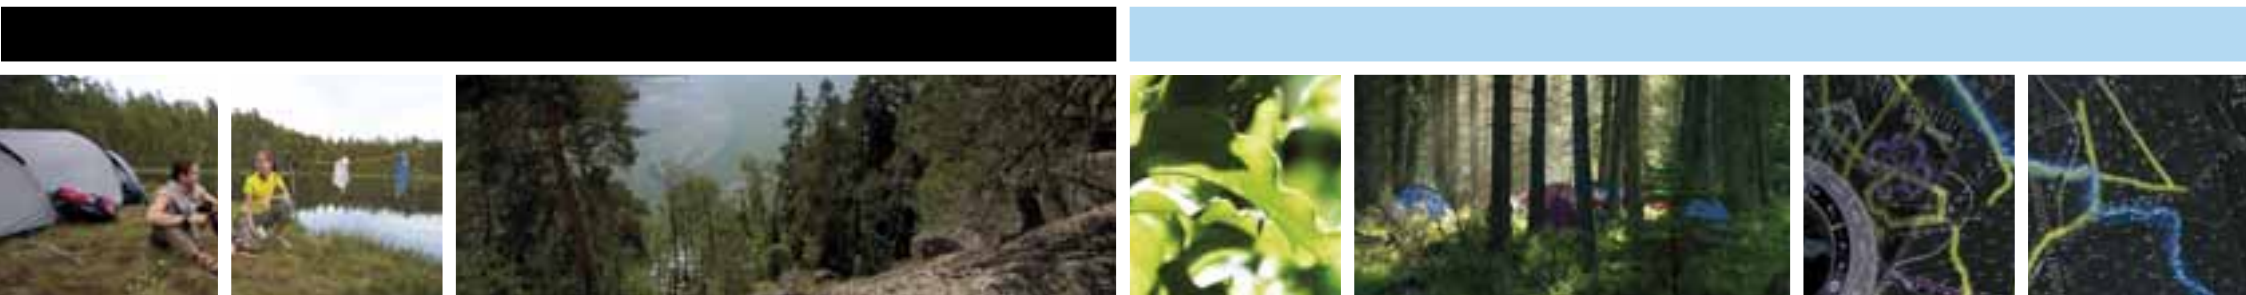

As the successor to the Lemon Light 3, this tent also offers enough space for three persons and all their equipment, or a considerably more spacious stay for two persons at only a slightly higher weight than the smaller Kestrel model, which it matches in terms of all its positive attributes and quality – and gives similar excellent value for money. Including vents which can be operated from the inside, countless improvements and twin reflective guylines.

# Green Hawk

Flysheet:	HydroTex Ultralite, Silicon coated on both sides
Hydrostatic Head:	3000 mm
Inner tent:	Ripstop polyester, breathable
Groundsheet:	Polyester 210T PU coated, 10.000 mm, sealed seams
Poles:	Alloy #7001 T6, 9.5 mm anodised
Max/Min. load	app. 3.4 / 3.3 kg
Sleeps:	2 persons
Characteristics:	Ultralight trekking tent for 2 persons

This model in our lightweight series offers plenty of space for two persons, who each have their own entrance and pack storage area thanks to the transverse sleeper design. The two apses each have two side entrances to provide excellent tent ventilation in hot weather. A universal, simple to handle trekking tent, up to the highest demands and offering many advantages with its two entrances.

# the trekking tents

**HydroTex<sup>®</sup>**  
**HD**

The new HydroTex HD material is one of the most important features of the new Trekking series and is the result of our search for a lighter but nevertheless high-strength flysheet fabric. This material, exclusively manufactured for Robens, is a 75 denier high-density ripstop polyester with a PU coating and a 5000 mm waterproofing rating, which is further treated to be flame-resistant for your greater protection. All seams are made additionally waterproof using the latest machines, so that our Trekking tents can withstand the worst weather and the highest winds – even after years of intensive use.

- Main pegging points have loops which also can be fastened by stones, logs or skis
- Sturdy webbings with woven loops make extra strong storm guying points and spread the pressure
- Pegs made of strong alloy
- Fly sheet made of HydroTex HD with a hydrostatic head of more than 5000 mm
- Covered zippers secured by velcros
- Clip-On-System for quick and easy erection and dismantling, the inner tent staying dry in rainy weather
- Long adjustable guy lines are connected to a pair of slot webbings
- Pole sleeves made of strong 210D Oxford nylon

Robens Trekking – a great line of innovative quality tents that are designed for the outdoor user to be functional yet providing superb value and excellent function. Made to exacting standards these tents offer the consumer stability, space and portability into the wild environments that exist throughout Europe and the World.

Item 300520

# Summer Wind

Flysheet:	HydroTex HD, PU coated, fire retardent
Hydrostatic Head:	5000 mm, sealed seams
Groundsheet:	Polyester 210T PU coated, 10.000 mm, sealed seams
Poles:	Not incl., use walking sticks/telescopic poles
Max/Min. load	app. 1.5 / 1.4 kg
Sleeps:	2 persons
Characteristics:	Ultralight single wall tent for 1-2 persons

The ultralight Summer Wind is now part of our Trekking range. Since virtually no one goes trekking without trekking poles these days, it was a logical step for us to develop a tent that uses these poles as tent poles. The Summer Wind is therefore wonderfully light and takes up hardly any room in the rucksack, although it is a true two-person tent. Large, adjustable vents ensure excellent ventilation. The tent can also be set up between trees, branches, paddles or normal tent poles.

Item 300524

# Voyager 2

Flysheet:	HydroTex HD, PU coated, fire retardent
Hydrostatic Head:	5000 mm, sealed seams
Inner tent:	Ripstop polyester, breathable
Groundsheet:	Polyester 210T PU coated, 10.000 mm, sealed seams
Poles:	Alloy #7001 T6, 9.1 mm anodised
Max/Min. load:	app. 2.8 / 2.6 kg
Sleeps:	2 persons
Characteristics:	Ultralight trekking tent for 2 persons

Voyager 2 is the smallest model in our series of "Gothic-arch design" tunnel tents. The arch, pointed as in Gothic buildings, offers generous overhead space and tent volume. This shape makes rainwater drain off quickly and snow slide off easily. This lightweight tent is quick to erect and offers reliable protection for two persons and their packs. The low air resistance and double guylines ensure stability in strong winds.

Inner tent:	Ripstop polyester, breathable
Groundsheet:	Polyester 210T PU coated, 10.000 mm, sealed seams
Poles:	Alloy #7001 T6, 9.1 mm anodised
Max/Min. load	app. 4.7 / 4.5 kg
Sleeps:	3 persons
Characteristics:	Ultralight trekking tent for 3 persons

This larger model in our Voyager series with its innovative “Gothic-arch design” can accommodate three persons and has ample storage space in the large living area, which can also be used for cooking in poor weather. The tent can also be erected very quickly by one person in adverse weather conditions while the inner tent which is pre-fitted in the factory remains dry, even in the rain. The Voyager 3 is a real all-round tent which you can rely on to be completely up to the job in almost any area of application. This model has an additional net door.

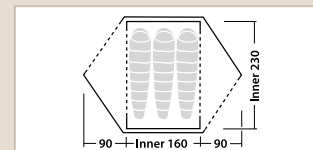

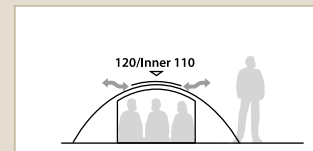

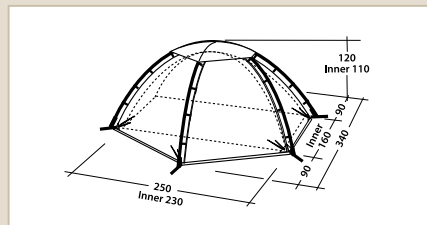

Item 300521

# Sunset Dome

Flysheet:	HydroTex HD, PU coated, fire retardent
Hydrostatic Head:	5000 mm, sealed seams
Inner tent:	Ripstop polyester, breathable
Groundsheet:	Polyester 210T PU coated, 10.000 mm, sealed seams
Poles:	Alloy #7001 T6, 9.5 mm anodised
Max/Min. load	app. 4.8 / 4.6 kg
Sleeps:	3 persons
Characteristics:	Trekking dome tent for 3 persons

The Sunset Dome is a particularly interesting tent in our Trekking range. The completely freestanding design gains excellent wind stability from its evenly distributed poles. The two apses offer a lot of storage room, variable access and excellent tent ventilation, achieved in combination with the large internally controlled vents. Our clip-on-system means that the tent can be quickly and easily put up or taken down, even under extreme weather conditions.

# X3GE

Flysheet:	HydroTex HD, PU coated, fire retardent
Hydrostatic Head:	5000 mm, sealed seams
Inner tent:	Ripstop polyester, breathable
Groundsheet:	Polyester 210T PU coated, 10.000 mm, sealed seams
Poles:	Alloy #7001 T6, 9.5 mm anodised
Max/Min. load	app. 4.8 / 4.6 kg
Sleeps:	3 persons
Characteristics:	Geodesic trekking tent for 3 persons

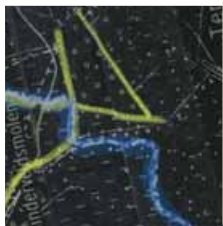

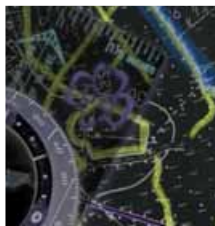

A geodesic tent which is designed as an all-round domed tent for two or three persons. It has a large apse for storage or cooking and five vents, two of which can be opened completely as windows to provide a good tent climate. Numerous guying points and a geodesic design provide the tent with good wind stability. Putting up and taking down the tent is done quickly thanks to the Clip-On system. This tent can fully satisfy the demands of virtually any intended use.

# Fortress

Flysheet:	HydroTex HD, PU coated, fire retardent
Hydrostatic Head:	5000 mm, sealed seams
Inner tent:	Ripstop polyester, breathable
Groundsheet:	Polyester 210T PU coated, 10.000 mm, sealed seams
Poles:	Alloy #7001 T6, 9.0 mm anodised
Max/Min. load	app. 5.6 / 5.4 kg
Sleeps:	3 persons
Characteristics:	Trekking tent for 3 persons, very stable in windy conditions

A spacious inner tent sleeping 3, a large, fully integrated vestibule with 2 entrances, fast pitching and dismantling with "Clip-On-System", and continuous pole sleeves, good ventilation – together with excellent stability due to the geodesic design and numerous guy points (even though it is also free standing, without pegs). UV-resistance PU window, reinforced, double welded inner tent suspension and good venting facilities.

# the adventure tents

We use HydroTex 5000 for the tents in the Adventure line. Because these models are designed for recreational camping holidays and not for use in the high mountains or other extreme situations, we have selected a slightly simpler fabric variant which does not have a ripstop structure and resists 5000 mm water column, but this is quite adequate for normal use. The UV resistance and fire-retarding characteristics of the fabric are features of HydroTex HD.

Sturdy webbings with woven loops make extra strong storm guying points and spread the pressure

Pole sleeves made of strong 210D Oxford nylon

Fly sheet made of HydroTex with a hydrostatic head of more than 5000 mm

Covered zippers secured by velcros

# Cabin 300

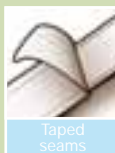

Flysheet:	HydroTex 5000, PU coated, fire retardant
Hydrostatic Head:	5000 mm, sealed seams
Inner tent:	Breathable polyester
Groundsheet:	Polyester 185T PU coated, Hydrostatic Head 5000 mm, sealed seams
Poles:	Alloy DAC #7001 T6, 11/13 mm, anodised
Max/Min. load	11.2 / 10.8 kg
Sleeps:	3 person
Characteristics:	Family tunnel tent with sewn-in groundsheet

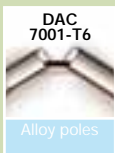

The two new Cabin models are comfortable, spacious tents with headroom height, with an innovative frame design that provides numerous benefits. The additional short arches at the front and rear provide weather protection and shade in the entrance area, as well as significantly more room in the sleeping area. The side arches stabilize the structure and make the tent practically free-standing. They also provide rain protection for the big side vents. The Cabin 300 with space for three people is an excellent combination of the classic, breathable polyester tent material and a modern, technical frame design.

# Trailstar 1

Flysheet:	HydroTex 5000, PU coated, fire retardant
Hydrostatic Head:	5000 mm, sealed seams
Inner tent:	Breathable polyester
Groundsheet:	Polyester 185T PU coated, Hydrostatic Head 5000 mm, sealed seams
Poles:	Alloy DAC #7001 T6, 8.5 mm, anodised
Max/Min. load	1.9 / 1.7 kg
Sleeps:	1 person
Characteristics:	Light weight trekking tent for 1 person

The two new Trailstar models are even more proof that you don't have to invest a fortune for lightweight Robens trekking tents. Both are light and good value for money, but they also have all the features that you would normally only expect from considerably more expensive tents: extremely water-tight, quick setup, exceptional ventilation via four adjustable ventilators, robust, long-life materials, plenty of storage room and numerous other practical details. The Trailstar 1 is a one-person tent designed for those that really want to go touring with the absolute minimum weight.

# Trailstar 2

- Flysheet: HydroTex 5000, PU coated, fire retardant
- Hydrostatic Head: 5000 mm, sealed seams
- Inner tent: Breathable polyester
- Groundsheet: Polyester 185T PU coated,  
Hydrostatic Head 5000 mm, sealed seams
- Poles: Alloy #7001 DAC T6, 8.5 mm, anodised
- Max/Min. load: 2.4 / 2.2 kg
- Sleeps: 2 person
- Characteristics: Light weight trekking tent for 1-2 person

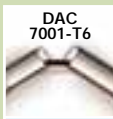

The Trailstar 2 is equipped identical to the Trailstar 1, but it has room for two people, who are optimally protected in this tent – even under the most adverse conditions. The four short corner poles, which are fixed to the tent, ensure there is plenty of room in the head and feet areas, and allow us to add additional big vents here, which can be adjusted with zips.

Hydrostatic Head	5000 mm, sealed seams
Inner tent	Breathable polyester
Groundsheet	Polyester 185T PU coated Hydrostatic Head 5000 mm, sealed seams
Poles	Alloy-combination 7001/6061 9.0 / 10.0 mm anodised
Max/Min. load	3.8 / 3.6 kg
Sleeps	2 persons
Characteristics	Lightweight two-berth dome tent

Lightweight two-berth tent ideal for two hikers or bikers because of its lowweight. It is fast to pitch and offers lots of comfort in spite of its compact size: each of both campers has a separate entrance and a porch of its own to stow the gear. The large screen doors of the inner tent provide effective air flow making the tent very suitable for warm climate.

Max/Min. load	4.1 / 3.9 kg
Sleeps	3 persons
Characteristics	Lightweight three berth dome tent

This tent is a larger version of the highly successful Forest Lodge. It is sufficiently large for three persons and has two opposite entrances with generous storage space. It can be the ideal tent for two persons wanting the added comfort of ample space and for whom weight is no issue. The well-thought-out, complete design of the small model is also characteristic of the larger tent.

# Valley Lodge

Flysheet	HydroTex 5000, PU coated, fire retardent
Hydrostatic Head	5000 mm, sealed seams
Inner tent	Breathable polyester
Groundsheet	Polyester 185T PU coated Hydrostatic Head 5000 mm, sealed seams
Poles	Alloy-combination 12.2 / 11.5 mm, T6, anodised
Max/Min. load	10.7 / 10.2 kg
Sleeps	4 persons
Characteristics	Top quality family tent with stand-up height

Valley Lodge is easy-to-set-up and gives full standing room inside. Ideal as a comfortable travelling tent for the entire family. The inner area is divided into two halves; the sleeping cabin and the living area, which is large enough to accommodate four people around a table. Using the combination of pole sleeves and the "Clip-On-System" gives a strong tent in all conditions. Other features include a clear window, reinforced double welded inner tent suspension and adjustable pegging points.

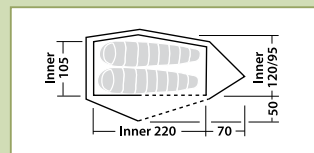

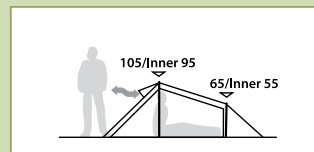

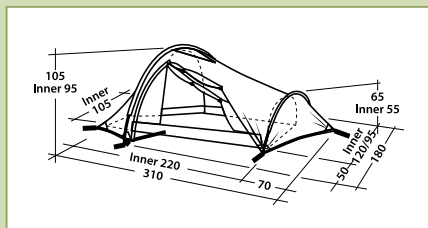

Item 300565

# Small Dreamer

Flysheet	HydroTex 5000, PU coated, fire retardent
Hydrostatic Head:	5000 mm, sealed seams
Inner tent	Breathable polyester
Groundsheet	Polyester 185T PU coated
	Hydrostatic Head 5000 mm, sealed seams
Poles	Alloy #7001 T6, 9.0 mm, anodised
Max/Min. load	2.6 / 2.4 kg
Sleeps	2 persons
Characteristics	Light weight trekking tent

Small lightweight tent provides space and storage space for 2 people, and because of its small packing dimension it fits easily into a rucksack or bicycle pannier. It's low profile offers the wind a very small contact area and the numerous guy points and guy lines provide additional stability. Quality alloy poles with a brilliant anodised surface. Fast pitching and dismantling due to the "Clip-On-System", and the inner tent remains dry even in the rain. "Sky-View" window, reinforced, seam-taped inner tent suspension and adjustable guy lines.

Flysheet	HydroTex 5000, PU coated, fire retardent
Hydrostatic Head:	5000 mm, sealed seams
Inner tent	Breathable polyester
Groundsheet	Polyester 185T PU coated
	Hydrostatic Head 5000 mm, sealed seams
Poles	Alloy #7001 T6, 9.5 mm, anodised
Max/Min. load	5.8 / 5.5 kg
Sleeps	4 persons
Characteristics	Spacious tunnel tent with large living area

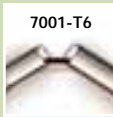

Our successful Dreamer tunnel tent continues for 2010. The higher central arc and the new door shape in the flysheet make getting into the tent even more comfortable. The tent has lots of room for three to four persons who can store plenty of equipment in its large living area or even cook there when the weather is poor. Despite its size the tent is quick to erect and is very stable even in bad weather. The additional large side opening provides direct entry to the inner tent and another means of ventilation.

# Cosy Dreamer

Flysheet:	HydroTex 5000, PU coated, fire retardent
Hydrostatic Head:	5000 mm, sealed seams
Inner tent:	Breathable polyester
Groundsheet:	Polyester 185T PU coated, Hydrostatic Head 5000 mm, sealed seams
Poles:	Alloy #7001 T6, 8.5 mm, anodised
Max/Min. load	3.4 / 3.2 kg
Sleeps:	2 person
Characteristics:	Tunnel tent with porch area

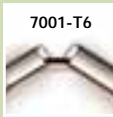

The new Cosy Dreamer closes the gap between the Small and Light Dreamer models. It provides more space in the inner tent and vestibule than the Small Dreamer, and it also has a "comfier" entrance and better ventilation. The compact pack size and its low weight mean it is an ideal, reliable beginner level trekking tent for those first big trips with your rucksack or bike.

Poles	Alloy 7001 12.8 / 12.0 mm T6, anodised
Max/Min. load	13.1 / 12.7 kg
Sleeps	4 persons
Characteristics	Top quality family tent with stand-up height

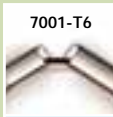

Large family tent, standing height, with universal inner tent. Because of its tunnel design, the tent can also be pitched by one person very quickly, and the inner tent remains dry in the rain. The amply dimensioned vestibule, with three doors, provides comfortable shelter in poor weather, and the four sealable windows provide outside views. The doors may optionally be opened and the four vents provide good ventilation. The good finish and material quality, ample space and the host of well thought-out detail solutions are unusual for a tent in this price range.

Max/Min. load	17.1 / 16.6 kg
Sleeps	6 persons
Characteristics	Top quality family tent for family camping

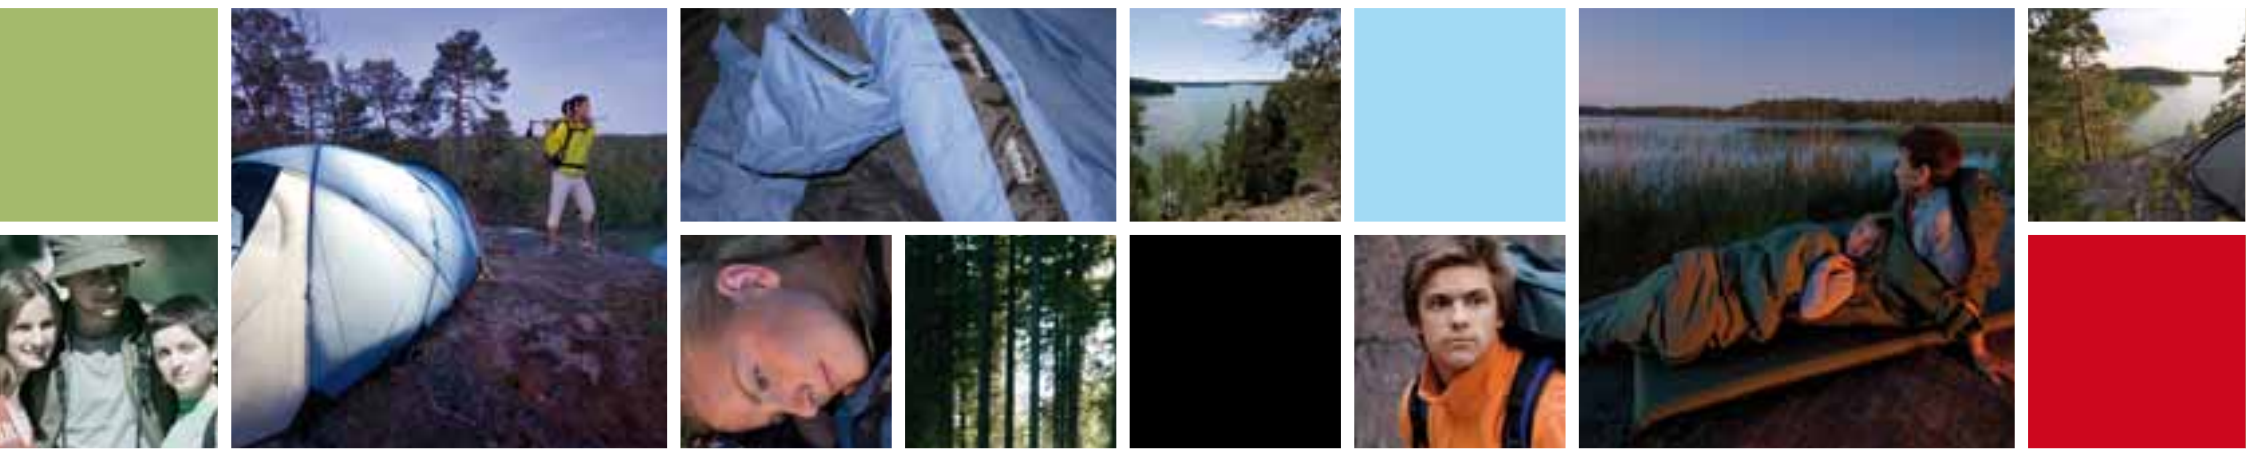

The "big brother" of our successful Double Dreamer. It offers even more living space. 4 side entrances with large PVC windows, and curtains on the inside. All the doors can also be opened when you want a larger shaded area. An additional large front entrance provides even more options if you do not want to erect the inner tent. Despite its size, the tent can be pitched quickly and because of its strong, alloy poles and numerous guy points, it is extremely stable.

# the outback tents

HydroTex Polycotton is designed to make your tent more comfortable to live in especially on those hot days. The woven fabric has a water repellent coating on the outside to allow droplets to form and run off the tent then as the rain gets heavier the fabric closes up and seals itself to become waterproof. HydroTex Polycotton fabric has strong resistance to UV decay and when carefully looked after will last for years.

- Sturdy webbings with woven loops make extra strong storm guying points and spread the pressure
- Pole sleeves made of strong 210D Oxford nylon
- Fly sheet made of HydroTex Polycotton
- Universal inner tent with organiser pockets
- Covered zippers secured by velcros
- Long adjustable guy lines are connected to a pair of slot webbings
- Main pegging points have loops which also can be fastened by stones, logs or skies

Robens Outback - This line of tents in breathable polycotton has been created in response to many customer requests. Compared with polyester outer tents, this novel fabric keeps interiors noticeably cooler and more refreshing in direct sunshine, while also providing a very durable tent that is more stable in windy weather. All models feature a zip-out groundsheet that protects against dirt, insects and rain, yet can be removed for easy cleaning

# Horizon

Flysheet	HydroTex Polycotton
Inner tent	Polycotton
Groundsheet	Oxford polyester 210D, 3000 mm, sealed seams
Poles	Alloy #6061/7001, 13 mm T6, anodised
Max/Min. load	11.8 / 11.5 kg
Sleeps	4 persons
Characteristics	Spacious tunnel tent with large living area

This compact but roomy tunnel tent offers space for up to four persons. With both a front and side entrance equipped with mesh doors, the large living area is ideal for use as a storage area or as the kitchen during bad weather. The rear door offers additional direct access to the inner tent, as well as excellent ventilation on warm nights. Quick and easy to pitch, this tent will serve you well for many years to come.

# Double Horizon

Flysheet	HydroTex Polycotton
Inner tent	Polycotton
Groundsheet	Oxford polyester 210D, 3000 mm, sealed seams
Poles	Alloy #6061/7001, 19 mm T6, anodised
Max/Min. load	22.4 / 22.1 kg
Sleeps	4 persons
Characteristics	Top quality family tent with stand-up height

This large family tent is identical with the Double Dreamer in the Adventure line, one of our most successful models for many years. Like our other Outback tents, Double Horizon has a zip-out groundsheet that protects against dirt, draughts and insects. Easy to pitch, its versatile universal inner tent provides sleeping space for four persons, as well as plenty of room for gathering around a table in the living area – in good weather as well as bad. The mesh doors in all three entrances ensure campers of comfortable, mosquito-free evenings.

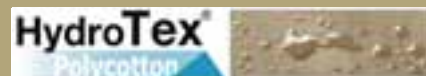

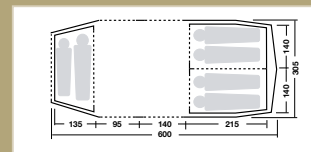

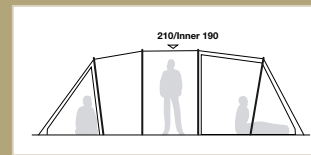

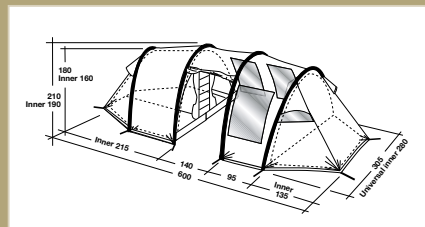

6061/7001					
Alloy poles	"Zip-out" Groundsheet	PVC-Window	Hanging Point System	Mosquito net	75 x 32 cm

Item 300592

# Triple Horizon

Flysheet	HydroTex Polycotton
Inner tent	Polycotton
Groundsheet	Oxford polyester 210D, 3000 mm, sealed seams
Poles	Alloy #6061/7001, 19 mm T6, anodised
Max/Min. load	29.8 / 29.5 kg
Sleeps	6 persons
Characteristics	Top quality family tent for family camping

With significantly more living area for increased comfort, and an optional inner tent in the front that can also be stowed away, this is the expanded version of Double Horizon. The Triple Horizon offers ample room for relaxing, preparing food, dining or playing with the kids in poor weather, while its zip-out groundsheet provides maximum comfort and protection against draughts and dirt. All five entrances have mesh doors that ensure full benefit of refreshing evening breezes, and effectively keep out mosquitoes and other insects.

# Landmark

Flysheet	HydroTex Polycotton
Inner tent	Polycotton
Groundsheet	Oxford polyester 210D, 3000 mm, sealed seams
Poles	Alloy DAC 7001 T6, 8.5, anodised Hybrid steel 13.0 mm
Max/Min. load	19.2. / 18.8 kg
Sleeps	4 persons
Characteristics	Traditional style in quality fabrics

The Landmark is a new high-tech interpretation of the classic tepee tent form. The two outside poles and an additional inside light-metal frame provide high wind stability and plenty of internal space, which is not, as is usual with other tepee tents, disturbed by a central pole. The two entrances can be set up as awnings and provide storage space and good ventilation for the spacious inner tent. The big windows provide good views to the outside – even in bad weather.

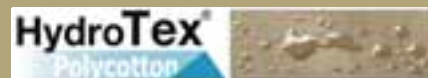

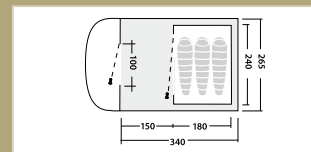

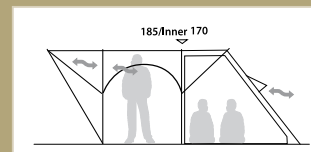

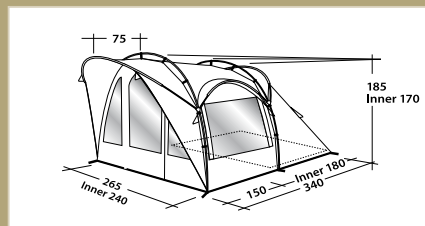

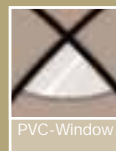

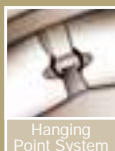

Item 300594

# Vista 300

Flysheet	HydroTex Polycotton
Inner tent	Polycotton
Groundsheet	Oxford polyester 210D, 3000 mm, sealed seams
Poles	Alloy DAC 7001 T6, 11.0/13.0, anodised
Max./Min. load	16.1 / 15.2 kg
Sleeps	3 persons
Characteristics	Quality touring tent with sewn-in groundsheet

The two new Vista models are comfortable, spacious tents with head-room height, with an innovative frame design that provides numerous benefits. The additional short arches at the front and rear provide weather protection and shade in the entrance area, as well as significantly more room in the sleeping area. The side arches stabilize the structure and make the tent practically free-standing. They also provide rain protection for the big side vents. The Cabin 300 provides plenty of space in the living and sleeping area for three people.

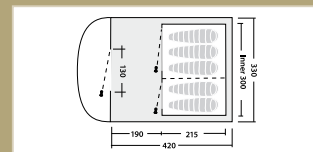

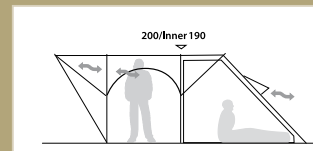

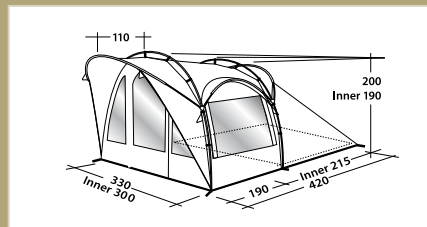

Item 300595

# Vista 500

Flysheet	HydroTex Polycotton
Inner tent	Polycotton
Groundsheet	Oxford polyester 210D, 3000 mm, sealed seams
Poles	Alloy DAC 7001 T6, 11.0/13.0, anodised
Max/Min. load	20.8 / 20.0 kg
Sleeps	5 persons
Characteristics	Quality touring tent with sewn-in groundsheet

This is the bigger version for up to five people, who can settle down for the night in our extremely popular universal inner tent. You can use it as one big room, close the zip partition and make it into two separate cabins, or, if you need more storage room, one half of the inner tent can also be removed, to make room for bicycles, for example. Both models have a completely closable floor sewed onto the fly sheet, which seals off the tent from wind, bugs and dust.

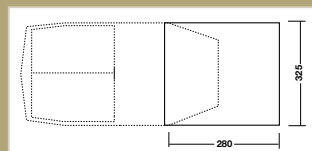

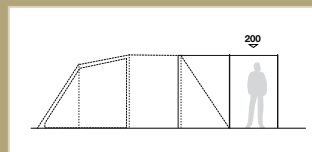

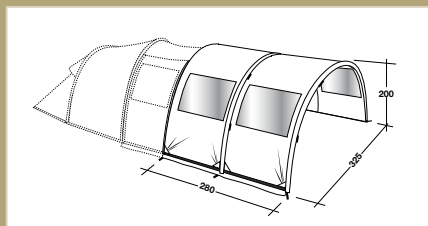

Item 300593

# Front Extension

Flysheet	HydroTex Polycotton
Poles	Alloy #6061/7001, 19 mm T6, anodised
Max/Min. load	8.6 kg
Pack size	78 x 30 cm
Characteristics	Extend the sheltered area of Double and Triple Horizon

The Double Horizon and Triple Horizon models can be provided with an attractive living area protected from sun and rain with the new Front Extension at the front of the tent. This well ventilated space, which is open to the front, is ideal as an eating space, somewhere to read a good book in the shade or sit peacefully enjoying a glass of red wine.

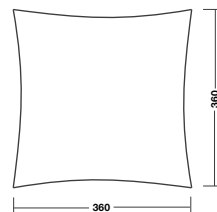

Item 300794

# Tarp

## TARP WITH POLES

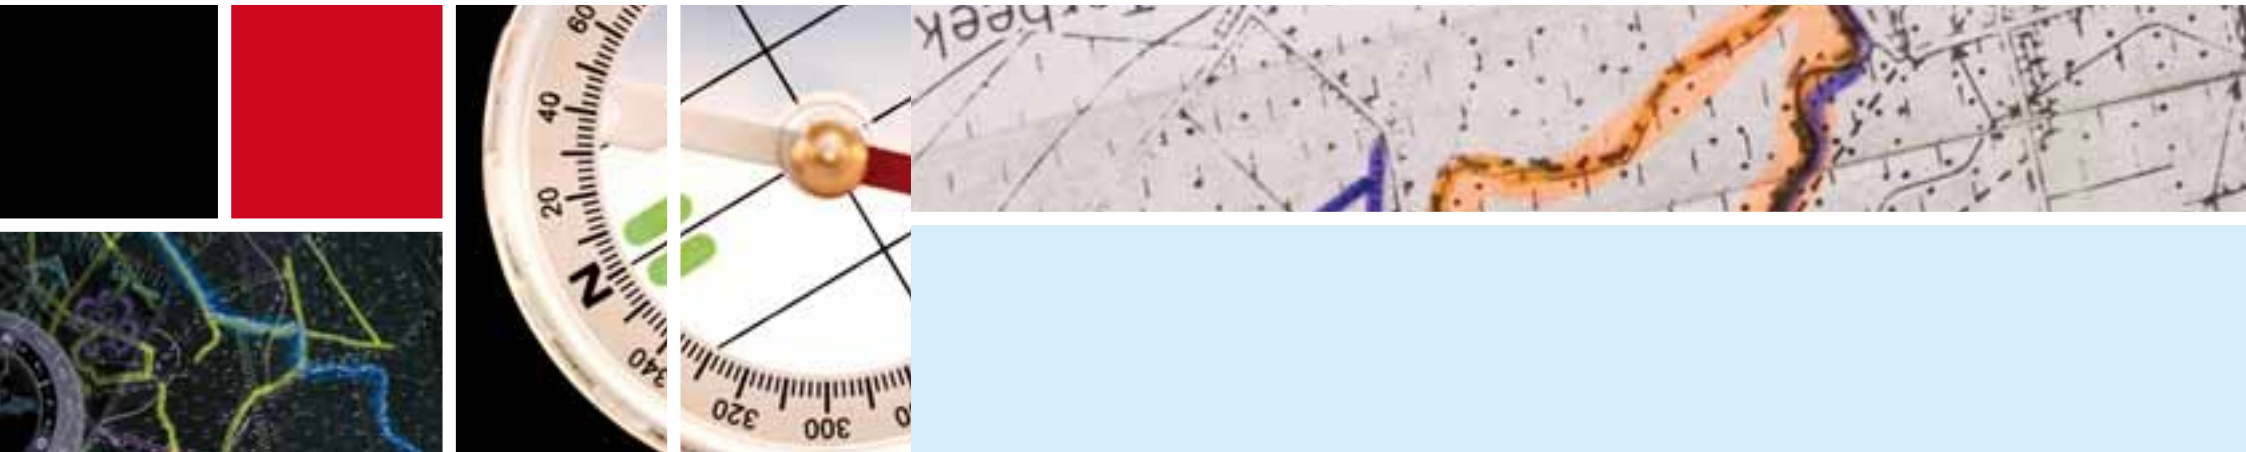

Fabric:	Polycotton
Size:	360 x 360 cm
Poles	Alloy #6061/7001, 22 mm
Pack size:	App. 87 x 17 cm
Weight:	App. 4800 gr.

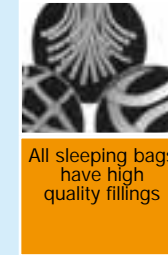

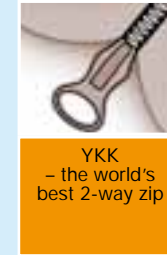

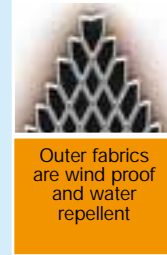

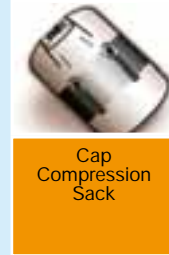

Equally useful as an awning in the garden as it is as an additional living area in front of your tent, the Outback Tarp with its numerous guying points is extremely versatile – at home or on the campsite. The strong polycotton blend fabric keeps its strength for years.

# sleeping bags

Tested to the EN13537 Standards

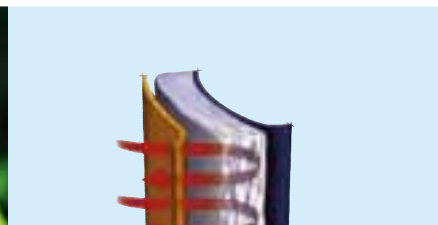

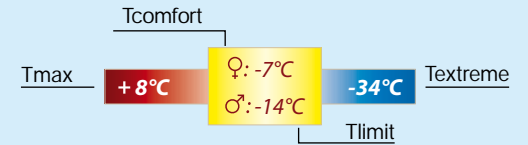

All our sleeping bags are tested to the EN13537 standards. This test is the official European Standard for the labelling of sleeping bags. It is a complete product standard which defines how to test, measure and label a sleeping bag. The EN13537 applies to all sleeping bags with the exception of sleeping bags for military use and sleeping bags for extreme temperatures.

To determine temperature limits of sleeping bags objectively, the European standard EN 13537 on requirements for sleeping bags specifies the use of a computer-controlled thermal manikin similar in shape and size to the human body. A sleeping bag containing a manikin is placed inside a temperature-controlled climate chamber and tested in accordance with a prescribed procedure to determine the thermal insulation properties of the bag. Recommended temperature limits are based on

the insulation properties measured and on knowledge of how the human body reacts to thermal conditions during sleep

- Tcomfort • the lower comfort limit in standard use (woman)
- Tlimit • the lower limit when curled up in standard use (man)
- Txtreme • the lowest extreme temperature for survival (woman)
- Tmax • the upper comfort limit without over heating (man)

**Ridge hood**  
Large, shaped hood with draw-string

**Thermocollar**  
An extra baffle of insulation around the shoulder area provides additional protection from the cold

**Full length zip baffle**  
A full length zip baffle to prevent heat loss around the zip

**Anti-snap zip guide**  
To prevent the zip jamming on all of our sleeping bags with an anti-snap zip guard

**Pocket**  
Allows you to keep your valuables close to you while you sleep

**Cap Compression Sack**  
Enables you to compress the pack size of your sleeping bag to a minimum for transport and storage

## Filling, Zipper and Features

Our range of sleeping bags are available in various fabric and price combinations to provide the complete range for the discerning user with high quality fillings and outer shell fabrics such as Tactel or Ripstop fabrics. All bags come with 2-way YKK zips with full baffle and anti-snap, compression stuffsacks along with an attention to detail that will surpass all limits.

## Single layer

The single layer construction is a common design for lightweight sleeping bags with synthetic fill and better sleeping bags with synthetic fibers as insulation fill. Here is a single layer of insulation between the inner and outer shell. While simple bags often feature sewn-through quilting with the quilt lines sewn through the filling, leaving the bags with little insulating ability. Along these lines, our Robens bags feature loose shells avoiding these cold spots throughout the bag.

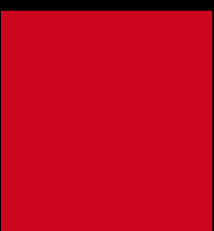

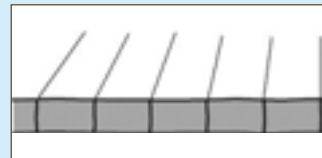

## Double layer

This is our design for sleeping bags with synthetic fill and better insulation capability for all round use. Here two layers of insulation in between using different quilt lines for the upper and the lower layer avoiding cold spots and maximum height of fill. Also on these bags we use the loose shell design for improved performance.

## Box construction

Our design for down sleeping bags providing maximum insulation. After the bag is sewn like shown in the picture, the separate chambers are filled with downs. The purpose of the vertical walls is to keep the downs in place to secure equal insulation all around you for warm and comfort sleep. After taking the bag out of the stuff sack, shake it well and the downs will expand filling the boxes again.

Full length zip baffle

Pocket

Down Excellent

# Down Range

Using 90/10 Quality Goose down the Down series offers the ultimate in sleeping bag quality. With a 600 Fill Power (FP) these bags cover a wide range of temperature limits from +25°C through to -14°C in the comfort range and below if needed. Each has a very small pack size relative to the performance of the bag and uses a box construction method with horizontal stitching. They all have the ridge hood, thermocollar for additional protection, full-length zip baffle and anti-snap guard along with a cap compression sack. A serious range of products for the discerning outdoor enthusiast.

# Rucksacks

For 2010 Robens the successful range of Robens rucsacs has been updated with with technical daysacs and alpine sacs as well as new light-weight options. Technical features, air ventilated backsystems, functional performance and durable fabrics have been key themes in the design process. The overall collection is now well balanced with a good selection of larger capacity rucsacs, updated alpine sacs and a combination of updated and new dayscas.

# Tarp

Large weatherproof canvas with many possible applications. Because of its special cut, the Tarp is very stable to wind and rain can easily run off it. Underneath the canvas there is a large area at standing height protected from the sun and rain. In poor weather it is possible to move freely underneath it in the dry – for cooking, eating, reading – and you do not have to spend rainy days lying in the tent. The ideal supplement to small light weight tents.
